

DRY GAS SEAL RACK

Dry gas seal rack (DGSR) is dedicated system for sealing of gas compressors. Main purpose is to provide dry, clean gas at specified parameters such as flow, pressure and temperature during startup, normal work and settle out.

Basic information:

- We can provide engineering (including seismic or CFD calculation)
- Fulfilled all requirement from API 614
- We can support you with commissioning of unit on site
- Our units can be used with most of gas composition including sour gas or hydrogen
- We can provide all necessary certificates like TR CU, ATEX, NACE, PAC, U-Stamp
- We can provide special design for harsh environment (eg. extreme low temperature (below -40 deg. C))

Other features:

- Reliable and long life design
- Minimal maintenance
- Self-acting and easily operated
- Small footprint
- Adaptable design
- Environment friendly
- Standard design complies with EU standards – CE marked
- Optional design according to GOST (EAC marked) or ASME
